## Warranty

LYNX Technik AG warrants that the product will be free from defects in materials and workmanship for a period of two (2) year from the date of shipment. If this product proves defective during the warranty period, LYNX Technik AG at its option will either repair the defective product without charge for parts and labor, or will provide a replacement in exchange for the defective product.

In order to obtain service under this warranty, customer must notify LYNX Technik of the defect before expiration of the warranty period and make suitable arrangements for the performance of service. Customer shall be responsible for packaging and shipping the defective product to the service center designated by LYNX Technik, with shipping charges prepaid. LYNX Technik shall pay for the return of the product to the customer if the shipment is within the country which the LYNX Technik service center is located. Customer shall be responsible for payment of all shipping charges, duties, taxes and any other charges for products returned to any other locations.

This warranty shall not apply to any defect, failure, or damage caused by improper use or improper or inadequate maintenance and care. LYNX Technik shall not be obligated to furnish service under this warranty a) to repair damage resulting from attempts by personnel other than LYNX Technik representatives to install, repair or service the product; b) to repair damage resulting from improper use or connection to incompatible equipment; c) to repair any damage or malfunction caused by the use of non LYNX Technik supplies; or d) to service a product which has been modified or integrated with other products when the effect of such modification or integration increases the time or difficulty servicing the product.

THIS WARRANTY IS GIVEN BY LYNX TECHNIK WITH RESPECT TO THIS PRODUCT IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED. LYNX TECHNIK AND ITS VENDORS DISCLAIM ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. LYNX TECHNIK'S RESPONISIBILITY TO REPAIR AND REPLACE DEFECTIVE PRODUCTS IS THE SOLE AND EXCLUSIVE REMEDY PROVIDED TO THE CUSTOMER FOR BREACH OF THIS WARRANTY. LYNX TECHNIK AND ITS VENDORS WILL NOT BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTIAL, OR CONSEQUENTIAL DAMAGES IRRESPECTIVE OF WHETHER LYNX TECHNIK OR THE VENDOR HAS ADVANCE NOTICE OF THE POSSIBILITY OF SUCH DAMAGES.

#### FCC 47 Part 15

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to the part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense

## **Getting Started**

Most CardModules are installed into the rack frames and system tested in the factory. If this is an upgrade part, or service exchange item then the module is supplied in a padded cardboard carton which includes the CardModule, rear connection plate and mounting screws.

## Packaging

The shipping carton and packaging materials provide protection for the module during transit. Please retain the shipping cartons in case subsequent shipping of the product becomes necessary. Do not remove the module from its protective static bag unless observing adequate ESD precautions. Please see below.

## **ESD Warning**

This product is static sensitive. Please use caution and use preventative measures to prevent static discharge or damage could result to module.

#### **Preventing ESD Damage**

Electrostatic discharge (ESD) damage occurs when electronic assemblies or the components are improperly handled and can result in complete or intermittent failure.

Do not handle the module unless using an ESD-preventative wrist strap and ensure that it makes good skin contact. Connect the strap to any solid grounding source such as any exposed metal on the rack chassis or any other unpainted metal surface.

#### Caution

Periodically check the resistance value of the antistatic strap. The measurement should be between 1 and 10 Megohms.

## **Product Description**

The D VD 5810 is a high quality 3GBit/s / HD / SD SDI/ASI distribution amplifier designed primarily for broadcast and professional applications.

Inputs of the D VD 5810 can be reclocked, or non-reclocked. Auto detection of multirate digital video bit rates in reclocked mode (143Mbit/s, 177Mbit/s, 270Mbit/s, 360Mbit/s, 1.485 GBit/s, 2.985GBit/s) and will transparently pass data from 15 Mbits/s to 2.985 GBit Mbits/s in non-reclocked mode.

Note: To ensure high signal quality the SDI receivers are located on the connection plate.

The D VD 5810 is part of the 5000 series of CardModules, which offer high quality, modularity and flexibility in a small form factor ideal for applications where space is at a premium.

#### **Functional Diagram**

## **Module Layout**

CardModule

## Connections

### Video

The D VD 5810 uses standard 75 Ohm BNC connectors. We recommend the use of high quality video cable for digital video connections to reduce the risk of errors due to excessive cable attenuation. Max cable lengths the module will support are shown below.

SDTV = 250m Belden 8281 (270Mbits/s) HDTV = 140m Belden 1694A (1.485Gbits/s) 3GBit/s = 80m Belden 1694A (2.97Gbits/s)

**Note.** Due to the compact design of the connection plate it will be necessary to use a connection tool to secure the BNC video connectors.

## Installation

If this module was supplied as part of a system it is already installed in the rack enclosure. If the module was supplied as a field upgrade please follow the installation procedure below.

**NOTE** Observe static precautions when handling card. Please see ESD warnings on Page 5.

Each Card Module is supplied with a rear connection panel and two mounting screws. Please follow the following procedure for installation of the card module into the Series 5000 Card Frame.

- 1. Select a slot in the card frame where the CardModule will be located.
- 2. Remove the blank connection panel from the rear of the rack (if fitted)
- 3. Install the rear connection panel using the screws supplied. Do not tighten the screws fully
- 4. Slide the card module into the card frame and carefully check the CardModule connects to the rear connection plate. The card should fit easily and should not require excessive force to insert, if you feel any resistance, there could be something wrong with the rear connection panel location. Do not try and force the connection this may damage the connectors. Remove the rear connection panel and check alignment with the CardModule.
- 5. Insert and remove the CardModule a few times to ensure correct alignment and then tighten the two screws to secure the rear connection plate.

## **Settings and Control**

The D VD 5810 has an integrated micro-controller, which enables the module to be configured and controlled locally via the dip-switch or from remote when using one of the optional controllers and control software.

Once set, all settings are automatically saved in non-volatile internal memory. (Flash ram) The module will always recall the settings used prior to power down.

# **PCB Front View**

Figure 3 – Switch and LED locations

## **Switch Settings**

Below the switch settings for the 4-position dip-switch are defined.

Switch	Setting	Function
1	ON	Enable Local Adjustment
	OFF	Disable Local Adjustment
2	ON	All outputs reclocked
2	OFF	All outputs non-reclocked
3	ON	Not used
3	OFF	Not used
4	ON	Not used
4	OFF	Not used

#### **Switch Function Detail**

#### Dip Switch 1

This switch is used to enable or disable local adjustments. Set to **ON** enables the setting of the other dip switches to configure the module. Set to **OFF** will prevent any switch settings taking effect.

**Note.** The module has a microcontroller and flash ram. When this switch 1 is set to **ON** any configuration settings made on the module with the dip switches will automatically be written into flash ram and stored. (see Auto Store) The module will function normally with the switch left in the **ON** position but it is recommended to set it to **OFF** to prevent accidental changes to the stored module configuration if the switches are moved.

#### Dip Switch 2

This switch configures outputs 1 to 8 to be reclocked or non reclocked. **ON** sets reclocked, **OFF** sets non-reclocked

#### **Factory Preset Condition**

The D VD 5810 is delivered programmed and preset for the following mode of operation:

Switch 1 **ON** Local Adjustment Enabled Switch 2 **ON** All outputs reclocked

If this is the mode of operation required, then no adjustments are necessary.

#### **Auto Store**

If no parameters are changed for 10 seconds then the current settings will be written into flash memory automatically, this can be seen by the channel status LEDS flashing yellow four times.

## **Alarm/LED Status Indicators**

The D VD 5810 module has integral LED indicators, which serve as alarm and status indication for the module. Function is described below.

#### **Channel Condition Indicators**

One status LED is provided on the top edge of the module (figure 3)

LED Color	Indication
Green	Input present
Red	Input missing

#### **Alarm Indicator**

There is also a single alarm LED on the lower edge of the module (figure 3). This is visible through the card frame front cover and provides a general indication of the module status.

LED Color	Indication
Green	Input present
Red	Input signal missing

LED **OFF** indicates power is lost, or there is a power supply fault.

## **Control System GUI**

When using the module in a system with the optional LYNX control system all module settings are available on an intuitive Windows GUI interface. Any settings made using the control system will override any settings made locally. All settings are stored automatically in the module flash RAM.

The above screenshot shows the complete module GUI. The Device info area contains information about the module including name and firmware revision. If used as part of a larger system (using the LYNX central control system) the modules position and physical location is displayed above the "locate" button.

**Note.** The Locate function is a tool used to quickly identify a module in larger systems. Selecting "locate" will flash the module alarm LED yellow. (This does not effect module operation)

The first screen displayed when the module is selected is the *Main Tab* this is a graphical representation of the modules overall function and signal flow (left to right).

The area at the bottom of the screen is the error log. Any fault condition (or event) will be time stamped and entered into the log.

## **Main Tab**

This screen is the main interface and is presented first when the module is displayed in the GUI.

The input detection indicates the bit rate of a connected signal. If no signal is detected the color of the input detection will turn red.

The check box enables or disables the input reclocking of the input.

#### **Events Tab**

The Events Tab is where the module alarming and error notifications are configured for the module.

GUI has an integrated error log, which is a simple text log file stored in the controller PC. This will record an event and timestamp it. The log can be seen at the bottom of the GUI screen and can be scrolled through using the scrolling bar.

#### Log in GUI Function

Events are selectable, you can chose if you want to record a particular event in the log (or not) or configure it to only record one side of the event. (*For example you might want to log when a SDI input was removed but do not want to log when it came back*). The ON/OFF trigger can be configured for each of the available events shown in the list and is setup using the checkboxes provided.

#### **Event Enabled**

By default all alarm conditions are activated (checked), by de-selecting a specific alarm condition I this column you are telling the module to ignore this condition completely. It will then not color the alarm LED, log and event in the GUI or send a SNMP trap.

#### **SNMP Support**

If the system is using a RCT 5031 Master Controller and the SNMP option is installed then the "SNMP Trap" columns become available.

Here you can configure what events you would like to transmit a "SNMP trap" for over the network. (This has no impact or influence over the internally error log maintained by the LYNX control system)

(Internal LYNX error logging and external SNMP traps can be configured independently).

**Note.** The simulated event is part of the GUI simulator and allows us to force a particular error condition for testing and demonstration purposes.

# **Specifications**

Video Inputs						
Signal Type	Serial digital video SMPTE 292M, 259M-C, 424M					
No. of inputs	1					
Connector	BNC					
Impedance	75 Ohm

# Service

#### **Parts List**

Due to the very dense design and high level of integration there the module is not user serviceable. Please contact LYNX for repairs or to request an exchange unit.

#### **Technical Support**

If you are experiencing problems, or have questions please contact your local distributor for further assistance.

Technical support is also available from our website.

Please do not return products to LYNX without an RMA. Please contact your authorized dealer or reseller for more details.

More detailed product information and product updates may be available on our web site:

www.lynx-technik.com

#### **Contact Information**

Please contact your local distributor; this is your local and fastest method for obtaining support and sales information.

LYNX Technik can be contacted directly using the information below.

Address LYNX Technik AG Brunnenweg 3 D-64331 Weiterstadt Germany

Website

www.lynx-technik.com

E-Mail

info@lynx-technik.com

LYNX Technik manufactures a complete range of high quality modular products for broadcast and Professional markets, please contact your local representative or visit our web site for more product information.
