NDAA Section 889 Compliance Declaration Part A

Product: OBD 1514E

Lynx Technik AG hereby certifies that, to the best of its knowledge and based on a reasonable inquiry of the bill of materials for the OBD 1514E, the product does not contain, incorporate, or rely upon any covered telecommunications equipment or services as defined under Section 889 of the John S. McCain National Defense Authorization Act for Fiscal Year 2019.

In particular, the OBD 1514E does not include equipment or components from Huawei Technologies Company, ZTE Corporation, Hytera Communications Corporation, Hangzhou Hikvision Digital Technology Company, or Dahua Technology Company.

The principal active components identified in the reviewed BOM are a microcontroller manufactured by Microchip Technology and an integrated circuit component manufactured by Marvell technology. All other identified items are standard passive components, including capacitors, connectors, and resistors sourced from commercial suppliers in Asia.

The OBD 1514E also does not establish any connection to Lynx Technik AG or third parties for telemetry, cloud services, remote maintenance, or other forms of data backhaul.
Consequently, Lynx Technik AG has no visibility into customer networks and no technical means to track how, where, or in which applications the OBD 1514E is deployed.
The only interaction with Lynx Technik AG systems occurs when our own optional software applications are used (LynxCentraal, YelloGUI) to manually inquire about available firmware updates and retrieve the firmware update file. This update process can also be carried out offline, without the device ever being connected to the internet.

Based on this review, Lynx Technik AG considers the OBD 1514E to be NDAA Section 889 Part A compliant.
